SUMMARY

Software Engineer specializing in AI, Machine Learning, and Deep Learning with hands-on experience in computer vision, neural network architecture design, and generative AI systems. Developed production-ready deep learning models for medical and agricultural applications, including a skin disease classification system trained on 79,900+ images and a tomato leaf disease detector achieving 98%+ accuracy. Experienced in building RAG pipelines, LangChain/LangGraph agents, and workflow automation. Comfortable owning the full ML product lifecycle: data preprocessing, model design, training, evaluation, deployment, and client delivery.

EXPERIENCE

Aptech Media

Apr 2026 – Present

AI Engineer Intern Under PMYS

Peshawar, Pakistan

- Building and deploying n8n automation workflows for business process optimization, reducing manual overhead for clients.
- Designing end-to-end workflow automations integrating APIs, webhooks, and third-party services to streamline business operations.

ICP AI-Lab

2024 – 2025

AI Research Intern

Peshawar, Pakistan

- Collaborated on a deep learning-based system for plant disease detection using CNNs; worked on preprocessing large image datasets and training custom TensorFlow models.
- Conducted model evaluation using accuracy, precision, and recall metrics; documented the research process and presented findings to the R&D team.

ICP AI-Lab

2024 – 2025

Computer Vision Developer (Intern)

Peshawar, Pakistan

- Contributed to the development of a skin disease classification system using image data; implemented image segmentation, feature extraction, and deep CNN architectures.
- Optimized model performance through hyperparameter tuning and data augmentation; assisted in deploying the model into a web interface for demo purposes.

PROJECTS

Skin Disease Classification (FYP) | Python, TensorFlow, CNN, Flask

2025

- Developed a custom CNN model trained on 79,900+ images spanning 10 skin conditions for early and accurate disease diagnosis.
- Full pipeline from data preprocessing and model training to web interface deployment; focused on making skin healthcare more accessible and reliable.

Tomato Leaf Disease Classification | Python, TensorFlow, Keras, CNN

2025

- Built a custom CNN architecture from scratch with a low parameter count, achieving 98%+ classification accuracy on tomato leaf disease detection.
- Applied cross-validation for reliability and generalization; demonstrated that lightweight, well-designed CNNs can match complex models in agricultural AI tasks.

Aptech Media HR Management Automation | n8n, Webhook Integration, REST APIs

2026

- Built an n8n workflow for Aptech Media automating HR management processes including employee data handling, notifications, and record updates.
- Integrated multiple services via webhooks and APIs to create a seamless, trigger-based HR pipeline with zero manual intervention for routine tasks.

Email Automation Workflow | n8n, Email APIs, Webhook Integration2026

- Designed and deployed an n8n-based email automation flow handling triggered email sequences, dynamic content injection, and automated follow-ups.
- Reduced manual email handling time significantly by automating scheduling, personalization, and delivery across the pipeline.

PDFs Assistant Bot | Python, LangChain, Vector DB, Semantic Embeddings2025

- Intelligent document-aware chatbot that extracts text from PDFs, generates semantic embeddings, and stores them in a vector database for efficient similarity search.
- Delivers context-aware, document-grounded responses to user queries — making large documents like research papers and manuals fast and intuitive to navigate.

EDUCATION

Islamia College University Peshawar	Sep 2021 – Jun 2025
Bachelor of Science in Software Engineering (BSSE)	Peshawar, Pakistan
PMDC Peshawar (Board of Peshawar)	2020
Intermediate Certificate	
Ghazali Public School (Board of Mardan)	2018
Secondary School Certificate	

SKILLS

AI / Agents: LangChain, LangGraph, RAG Pipelines, OpenAI API, Anthropic API

ML / DL / CV: TensorFlow, PyTorch, Keras, Scikit-learn, CNN, LSTM, Transformers, Computer Vision, Image Processing, Neural Network Architecture Design

Automation: n8n (Workflow Automation), Webhook Integration

Languages & Tools: Python, JavaScript, Java, SQL, Flask, FastAPI, Git, VS Code, Postman

Databases: MySQL, MongoDB, Firebase, Supabase

Languages: Pashto (Native), Urdu, English

CERTIFICATIONS

AI Machine Learning Workshop (2024)	Huawei iCloud AI (2025)
